- Screw-terminal connectivity
- 50 Hz/60 Hz noise rejection
- 250 Vrms, CAT II, channel-to-earth isolation

The NI 9217 is an RTD analog input module for NI CompactDAQ and CompactRIO systems. The NI 9217 features four channels and 24 bits of resolution for PT100 RTD measurements. The NI 9217, compatible with 3- and 4-wire RTD measurements, automatically detects the type of RTD (3- or 4-wire) connected to the channel and configures each channel for the appropriate mode. The module provides 1 mA of current excitation per channel and has less than a 1 °C accuracy error over its entire operating temperature range. NI provides calibration services for the NI 9217.
